

# What is the best: Helium or Air ? Halogen or HMI light ?

There is not a good or a bad solution but a solution adapted to your needs.

**In some situations, it is better to use helium balloons because of several advantages:**

- The range of helium balloons offers more possibilities of sizes
- Larger lighted areas
- Helium allows the balloon to go up higher in the sky
- So there is more visibility
- More magic, incomparable estheticism
- The balloon is compared to a sun in the night

**The air-filled balloon have some others interesting features:**

- More stable in the wind
- No restraint with helium
- Hardy
- Longer use

**The halogen light is**

- Warm and pleasant color
- Easy to use
- Efficient

**The HMI light is**

- Day light
- Three time more efficient
- Reproduces colors even better

Airstar technology even allows to dim halogen and HMI light thanks to the **color corrector**
