

Airstar, how does it work ?

Airstar is...

Easy to get

Airstar products are available either for sale
or for rent with
The distributors that can be found in the list under the "Contact" headline
Our distribution network allows a quick delivery thanks to our geographical proximity.

Easy to transport

Airstar balloons are stowed in "easy-to-transport" supports: small polyester linen cases with handles, small plastic boxes with handles, tube-shaped cases with handles, flight case on casters. Whatever the package is, the manipulation is made easy.

The envelope is protected in a woven case and the whole is protected by the packaging to dull shocks during the trip.

Easy to set up

During rental service, one or several technicians will be at your disposal to set up and to survey the balloon(s) during the event.

It's a complete solution.

You can use this service especially with big balloons which require more important logistics.

If you have chosen to buy a balloon, you have a direction of use inside: text and graphics that show how to set up the products easily and quickly. It can be resumed in 5 steps :

- 1 : open the envelope
- 2 : insert the electrical harness
- 3 : set up the stand or the cable
- 4 : hang the envelope on the support
- 5 : inflate the balloon:

With air, you just have to plug it as it is self-inflating

With helium, you have to connect the helium bottle to the terminal under the balloon.

Easy to use

The Airstar is a "plug & light" product: plug in it and it turns on (and is self-inflating in case of balloons with air).

Nor need to have the skills of an electricity specialist.

Complete mobility.

The balloons inflated with helium require a minimum maintenance each day (inflate the balloon to regain initial pressure).

Easy to use again

Many uses: film industry, communication, sport-leisure-tourism, cultural and sport events, rescue-security, work sites...

Products that adapt to the needs and applications

One balloon can be used many times: by only changing the slipcover for example.
